

Q.1 How and where is facebook using Machine Learning to improve user experience ?

Ans. Facebook is using machine learning to identify people in photos and to provide users with tags. It is also using Machine learning to customize searches, to help us find what we want. It also suggests people with the help of machine learning. Moreover, the PEOPLE YOU MAY KNOW is also based on Machine learning although there are a dozen other factors but machine learning is also it.

Q.2 How do you think deep learning can change the world and do wonders ?

Ans. I think deep learning can change the field of medicine. Because despite of it being in initial phase, it has helped detect cancer which is quite amazing. After further advancements I think it can help in precautions regarding a disease before it is even there. And Mimicry is also wonderful for people who have a problem in speaking.

Q.3. What is your dream AI project that can become into reality and can have a commercial value ?

Ans. My dream project is about an algorithm which can read Urdu words because it is of great commercial value. As newspaper agencies hire a lot of people just to input articles and stories into columns. There won't be any need of these people. So in my guess it has a great commercial value.
